

CALL FOR CHAPTERS

THE FUTURE OF TECHNOLOGY
IS NOT AUTOMATION.
IT IS ANTICIPATION.

Much contemporary philosophy of technology remains trapped between two exhausted positions: apocalyptic rejection and uncritical accelerationism. Both fail to address the deeper mutation: the gradual migration of human agency into frictionless systems that do not replace our decisions, but structurally anticipate them.

ETHICS LAB PRESS is opening a curated Call for Chapters for the inaugural volume of its **Perspectives** series.

WE ARE LOOKING FOR DIAGNOSTIC PHILOSOPHY.

We are not looking for literature reviews. We are looking for concise but conceptually strong contributions.

TOPICS

- | | |
|----------------------------------|---------------------------|
| Cognitive friction | Operative philosophy |
| Spatial mediation | Automation and delegation |
| AI and human agency | Accountability |
| Digital architectures | Ethics of design |
| Bodily interfaces and embodiment | Educational perspectives |

GUIDELINES

- 4,000 – 6,000 words
- English language
- Minimal-footnote format
- Strong argumentative identity
- Max. 12–15 contributors selected

DEADLINE FOR PROPOSALS
JULY 30, 2026
